

LEARN | COLLABORATE | NETWORK

M|17 gives you the chance to sit down, or even go for a run, with the engineers, consultants and developers who build MariaDB products, from the world-renowned open source MariaDB Server, to complementary products like MariaDB MaxScale and ColumnStore as well as third-party solutions like Docker, InnoDB, Galera Cluster, MyRocks and more.

This event is designed to give our customers and users unlimited opportunity to learn and plan their open source initiatives with every resource in the same place.

Looking for a reason to attend? Here are a few to get you started:

Learn

Learn from the engineers building MariaDB – attend technical sessions, register for a workshop, or visit the Expert Bar for one-on-one technical help to gain expertise in new functionality and key capabilities for storage, replication, security and more.

Collaborate

M|17 brings the engineers building MariaDB and its ecosystem into one place for collaboration and networking. Monty Widenius, the creator of MySQL and MariaDB, Facebook MyRocks database lead Yoshinori Matsunobu and others will be at the conference.

Network

M|17 will be filled with engineers from MariaDB ecosystem partners like Galera Cluster, Spider, Alibaba and more so you can learn about all the products you need to run a successful deployment.

Roadmap

MariaDB is introducing new products at a rapid pace. M|17 is the place to hear what's coming next – from new capabilities in the Server like support for PL/SQL, to more use cases supported with the introduction of ColumnStore for analytics and MyRocks storage engine for web-scale use cases.

Innovate

Launch new open source initiatives! MariaDB consultants, customers, community members and service teams will be at M|17 to discuss and share best practices for successful open source initiatives.

Certification

Become MariaDB certified at M|17. This is the first opportunity to take the brand new MariaDB certification exam, proving your skills as a MariaDB expert. Attendees who pass the exam will be the first ever to achieve MariaDB certification. The exam will be offered for FREE at the conference. After the event, check out <https://mariadb.com/> to find dates and locations for future certification exams.

Developer (Un)Conference

Join the community building MariaDB Server at the [Developer \(Un\)Conference](#) happening April 9 - 10, hosted by BNY Mellon in NYC, the two days prior to M|17. Sign up [here](#) and help create the agenda [here](#).

Fun

Join the party! We'll have cool cocktails and hip hors d'oeuvres while world-renowned DJ Miss Behavior spins the hot tunes. And for the early birds, we will host a fun run at 7 a.m. Wednesday morning.

Save!

March Madness is here and you can save 20% off registration with code M17TAKE20.

M|17 is going to be the open source database event of the year. We look forward to seeing you there!
